

XP Deus Water Antenna

Now the very best land detector can be used in the water!

...with simple installation and this complete kit which consists of the following:

- 4' cable
- 3 Velcro ties
- 4 plastic tie-wraps
- This instruction page

Step 1: Secure one of the black ends of the cable tightly in position at the left side of the coil next the "bump" (transmitting antenna).

Step 2: Wrap the antenna wire around the Deus shaft with the other end on the antenna ending at the control box.

Step 3a or 3b: Secure the end in close proximity to the control box. Or place on the shaft near the control box. You will now be able to safely wade with the XP Deus and receive signals.

Please do not get the control box wet; this antenna is made for shallow water only, and the control box should always be protected from moisture.
